

Jhonny Surf Store

Website Launch Status

Audience: owner + shop/ops + technical team

Last updated: 19 July 2026

Live sites: jhonnysurfstore.com · jhonnysurfstore.pt

Markdown source: docs/website-launch-status.md

PDF version: docs/website-launch-status.pdf

1. Purpose

This document states whether the website is ready for **public online purchases**, what already works, and the **ordered backlog** to go live on both domains with full payment support.

2. Executive verdict

Not ready for public purchases yet.

The marketing site, product catalog, and shopping foundations are largely in place. What still blocks selling online is **real payment processing, post-checkout payment instructions, stock/coupon correctness, order emails**, and **opening the .pt domain**.

Area	Status
Brand / homepage content	Ready
Product catalog (Odoo → site)	Ready (synced)
Browse shop, filters, product pages	Ready for browsing
Cart + guest/account checkout skeleton	Built, not production-safe
Payments (MB WAY, Multibanco, PayPal, Klarna)	Not ready
Order email + ops admin	Not ready
Public go-live (.com + .pt)	Blocked

3. What works today

- Homepage and store story (New In, categories, services, Local Heroes, visit/contact).
- Shop at `/loja` with catalog from Odoo/Postgres; product detail pages and ratings.
- Guest and registered carts; add-to-cart with stock checks at add/checkout time.
- Account register / login / session.
- Coupon validation plumbing (including welcome / athlete codes when seeded in DB).
- Pickup vs ship-to-address pricing logic on the server.
- Legal pages in Portuguese and English.
- **.com** is publicly browsable (home, shop, checkout pages load).
- **Odoo** is connected in production (catalog sync / auth OK as of last scan).

4. Target launch decisions

These are the agreed end-state for go-live:

Decision	Choice
Domains	Open .com and .pt together (remove .pt coming-soon gate)
Day-1 payments	MB WAY + Multibanco + PayPal + Klarna
Free shipping	€100 everywhere (banner, checkout, legal)
Languages at launch	Site already supports PT / EN / ZH for most UX; legal ZH can follow later

5. Current gaps (snapshot)

From production integration status and code review:

Integration	Production status
Odoo	Configured and authenticated
Email (Resend)	Not configured — order emails skipped
Ifthenpay MB WAY	Not configured — would fall back to mocks
Ifthenpay Multibanco	Not configured — would fall back to mocks
Ifthenpay callback secret	Not configured
PayPal	Placeholder only
Klarna	Placeholder only

Other important mismatches / risks:

- Banner already says free shipping over **€100**; checkout + legal still use **€50**.
- After checkout, customers do **not** see Multibanco entity/reference or MB WAY next steps.
- Stock is checked but **not reserved/decremented** → oversell risk.
- Coupons can be consumed when the order is created, even if payment never completes.
- Ship-to-address fields are not strictly required in the UI.
- `.pt` still rewrites to the coming-soon page.
- If catalog/DB fails, mock demo products must not become sellable.
- No simple admin screen to process orders; no customer “My orders” history.

6. Priority backlog

Effort below is **rough technical sizing** for planning (not a calendar commitment). $S \approx \text{hours}$ · $M \approx 1\text{--}2 \text{ days}$ · $L \approx \text{several days}$.

P0 — Must ship before public purchases

#	Item	Why it matters	Effort
P0.1	Configure Ifthenpay (MB WAY + Multibanco keys + callback URL + secret) and fail closed in production (no mock refs)	Without this, “paid” orders are fake	S–M (config + code guard)
P0.2	Implement and connect PayPal for real capture/redirect	Required for day-1 payment set	L
P0.3	Implement and connect Klarna for real checkout	Required for day-1 payment set	L
P0.4	Harden payment callback (secret required, amount/status checks)	Prevents false “paid” states	S–M
P0.5	Post-checkout UX + email: show Multibanco entity/ref, MB WAY status, PayPal/Klarna next steps	Customer must know how to pay	M
P0.6	Configure transactional email (Resend or SMTP) and send order + payment instructions	No email = broken ops and trust	S (config) + S–M (content)
P0.7	Reserve/decrement stock on order (release on cancel/expiry)	Stops overselling	M
P0.8	Apply coupon usage only after payment (or roll back if unpaid)	Stops burned coupons	S–M
P0.9	Require full shipping address when ship-to-home is selected	Avoid undeliverable orders	S
P0.10	Align €100 free shipping in checkout logic + legal pages	Matches banner and launch decision	S
P0.11	Show shipping cost in checkout total UI	Total currently can understate amount due	S
P0.12	Remove .pt coming-soon gate when ready to open both domains	Needed for joint .com/.pt launch	S
P0.13	Block mock catalog from selling in production	Avoid selling demo products	S

#	Item	Why it matters	Effort
P0.14	Confirm production secrets (session, DB, Odoo, payments, email) on Vercel	Security and reliability	S

P0 rough total: about **2–4 weeks** of focused build + provider setup, dominated by PayPal + Klarna (P0.2–P0.3) if both must ship on day 1.

P1 — Launch ops and trust

#	Item	Why it matters	Effort
P1.1	Minimal admin orders view (list, status, pickup/ship)	Staff cannot run the store blind	M–L
P1.2	Customer My orders in account	Expected after purchase	M
P1.3	Password reset / email verification	Account safety for public traffic	M
P1.4	Enforce JHONNY10 rules (registered + first purchase)	Matches welcome offer promise	S–M
P1.5	Update FAQ / trust copy that still implies the store is “not ready”	Avoid conflicting messages at launch	S
P1.6	Smoke-test suite or scripted checklist for cart → pay → callback → paid	Catch regressions before opening traffic	M
P1.7	End-to-end test orders on each payment method (sandbox then live)	Go-live gate	M (ops time)

P2 — Soon after go-live

#	Item	Effort
P2.1	Localize shop / PDP / checkout strings still hardcoded in Portuguese	M
P2.2	Real cart drawer (lines, qty, remove) instead of count-only header cart	M
P2.3	Hide empty Odoo categories (e.g. women wetsuits with 0 products) or fill in Odoo	S-M
P2.4	Product image gallery (beyond single thumbnail)	M
P2.5	Clear rules for bulky board shipping vs standard € shipping	S-M (policy + code)
P2.6	Variant UX if size/color are separate Odoo products	M-L

P3 — Later / growth

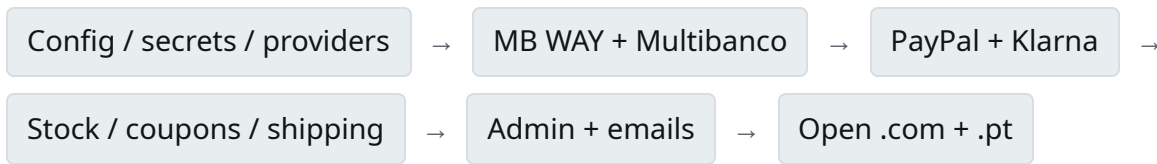

#	Item	Effort
P3.1	Chinese (ZH) legal pages	M
P3.2	SEO: sitemap, robots, product OG/JSON-LD	S-M
P3.3	Analytics (consent flag exists; wire GA/GTM or equivalent)	S-M
P3.4	Ratings on product cards (already on PDP)	S
P3.5	Abandoned-cart emails	M

7. Suggested go-live sequence

- 1. Configure production:** Ifthenpay, email, Odoo, secrets — fail closed if payments/email missing.
- 2. Ship PT payment path:** MB WAY + Multibanco end-to-end (UI + email + callback).
- 3. Ship international payments:** PayPal, then Klarna (or in parallel if two people).
- 4. Harden commerce rules:** stock reservation, coupons-after-pay, address required, €100 shipping everywhere, honest checkout totals.
- 5. Ops minimum:** admin order list + FAQ/trust copy update.

6. **Open domains:** remove `.pt` coming-soon; keep `.com` live.

7. **Gate:** complete one successful live (or final sandbox) order per payment method; then announce.

8. Definition of “live for purchases”

All of the following must be true:

- ☐ Customers can pay with **MB WAY, Multibanco, PayPal, and Klarna** for real (no mocks/placeholders).
- ☐ After checkout they receive clear **payment instructions** (page + email).
- ☐ Paid orders update correctly via **secure callback**.
- ☐ Stock cannot oversell; coupons only stick on paid orders.
- ☐ Free shipping threshold is **€100** in banner, checkout, and legal text.
- ☐ Order emails send reliably.
- ☐ Staff can see and update orders.
- ☐ **jhonnysurfstore.com** and **jhonnysurfstore.pt** both serve the full shop (no coming-soon gate).

Until that checklist is green, treat the site as **marketing + catalog preview**, not an open webshop.
